Stress testing is considered an integral part of the Atlantic Central's Enterprise Risk Management framework. The company utilizes stress testing to consider the potential effects of the company's financial condition corresponding to exceptional but plausible events. In one scenario used, corporate stress testing considers the impact of an economic downturn using a 30% decline in real estate valuations. This stress considers the impact of additional residential mortgage defaults and losses, and considers the impact on risk weighted assets and capital. This stress test provides valuable insight into the potential impact of a significant real estate downturn, and is part of the annual corporate capital and risk management planning process. Most recent results indicate the company is well positioned to accommodate a significant economic downturn involving significant real estate devaluations.
