

Residential Mortgage Lending

Residential mortgages (insured vs uninsured):

The following table presents amount of insured and uninsured residential mortgages by geographic areas:

% and \$ - Residential mortgages by Province as of September 30, 2017					
Province	Insured		Province	Uninsured	
	%	\$		%	\$
NS	24.49%	676,374	NS	19.65%	132,831
NB	36.17%	999,111	NB	15.62%	105,601
NL	14.60%	403,300	NL	33.85%	228,769
PE	24.74%	683,377	PE	30.88%	208,717
Total	100.00%	2,762,161	Total	100.00%	675,918

Insured residential mortgages are mortgages where our exposure to default is mitigated by insurance through Canada Mortgage and Housing Corporation (CMHC) or other private mortgage default insurers.

Residential mortgages by amortization period:

The following table provides a summary of the percentage of residential mortgages that fall within various remaining amortization period ranges based upon the contractual terms of the mortgage agreement:

% Residential mortgages by Amortization as of September 30, 2017							
0 - 4 yrs	5 - 9 yrs	10 - 14 yrs	15 - 19 yrs	20 - 24 yrs	25 - 29 yrs	30 - 34 yrs	35 - 39 yrs
23.81%	34.92%	22.22%	12.70%	4.76%	1.59%	0.00%	0.00%

Average loan-to-value (LTV) ratio for newly originated and acquired uninsured mortgages:

The following table provides a summary of our average LTV ratio for newly originated and acquired uninsured conventional mortgages by geographic region:

Average Loan to Value by Province Uninsured Residential July 1st to September 30th, 2017			
<u>NS</u>	<u>NB</u>	<u>NL</u>	<u>PE</u>
0.00%	0.00%	0.00%	0.00%

During the period of July 1st to September 30th, 2017 there were no newly originated or acquired uninsured mortgages.

Stress testing is considered an integral part of the Atlantic Central's Enterprise Risk Management framework. The company utilizes stress testing to consider the potential effects of the company's financial condition corresponding to exceptional but plausible events. In one scenario used, corporate stress testing considers the impact of an economic downturn using a 30% decline in real estate valuations. This stress considers the impact of additional residential mortgage defaults and losses, and considers the impact on risk weighted assets and capital. This stress test provides valuable insight into the potential impact of a significant real estate downturn, and is part of the annual corporate capital and risk management planning process. Most recent results indicate the company is well positioned to accommodate a significant economic downturn involving significant real estate devaluations.
